Gardner's Station at the
Gumbower Creek

Gumbower Creek

Swamp near the
Gumbower

Gumbower Creek

Gumbower Creek

This little bird is very
plentiful all along the banks
of the Murray

The White rumped Wood Swallow
is mostly found in the neighbour-
hood of Creeks and lagoons.

also the Common Wood
Swallow which prefers dark
shady thickets and does not
keep so long out the way

there is hardly a Creek or a
lagoon in the neighbour-
hood of the Murray where
this pretty little bird is not
seen, rushing swiftly along
the sandy edges in search of
food

Not a very common bird.
which keeps always close
to the water perching on
low dry branches and
watching the insects?
as well as chiefly feeds

This bird is often met
with on the river banks.
its voice is very monotonous

one of the most common
birds on the Banks of the
Murray, the flight of it is
very quick

the Salt Bush
scrub near
Lake Boga

This pretty little bird
is very shy and runs
through the scrubby salt
bushes as a great rule
always keeping out of sight
of the sportsman and
it is only with great
perseverance that it
is secured. —
They are found from 5 to 10 feet
to one rock bird. —

Begins with Hamilton Lake
to the North of the junction
of Murray and Sturt's bridge

Lake Boga
and
the surrounding
Country

NATURAL HISTORY OF VICTORIA.

Locality whence obtained.

Donor's Name.

Remarks.

Neighbourhood
of
Lake Hoga
and
the Banks of
the Murray

a very beautiful Bird
seen in flocks sometimes
as many as 3 or 400 together
often frequented this Bird
on the edge of a bog and
feeding at it seemed to me
in the mud and several
Birds perched in their
bills full of sand & dirt

Always keeping company
and feeding with the
Sulphur Crested Cockatoo

very plentiful in the
neighbourhood of Lake
Hoga but only seldom
rust with beyond it

very rare

difficult to procure they
occupy a hollow branch
during the day time
and fly out after
nightfall. —

Mallee
scrub

very quick

Always found near the
river making the scene
gorgeous very deep with
its curious noisy notes. —

This handsome bird
is to be found in large
flocks in the scrubby
low forest preferring
dry trees and branches
for perching on. —
I have found dead pigeons
at times very shy indeed
so that I could not approach
within gun shot
wherefore they might be
thrown at with stones without
fearing me or indeed in
other parts of the scrub. —

Lakes and Lagoons

This bird is very plentiful
in some of the reedy
edges of the neighbourhood
of the morass.
It hides during the day
in the high grass

Murray Scrub

This little bird is anything
but scarce in some parts
of the Murray scrub. It
prefers the Cypress trees and
runs along its branches
with celerity.

You find thousands
of these birds were
collected on the Darling.

Murray and
Darling Scrub

This mammalian animal
inhabits both shores of
the Murray and Darling
feeds on coarse grass is
nocturnal in its habits
and constructs a sort
of abode in the long
grass.

Landwary

It was seen in a field of
tall grass in hollow
lands and it is easily
skinned alive. 4 of these
singular animals were
sent alive to the bank
for some time they would
eat meat but always refused
lettuce before anything else

Remarks.

Murray and Darling Scrub

this handsome Parrot is very scarce near the River but is more plentiful ~~near~~ in the thick scrub from whence they come with a mounting to the highest Water but return immediately after having satisfied their thirst.

this bird constructs a rough nest on the ground and lays from 3 to 4 Eggs of greenish Color with darker spots

Oct. I had 2 young birds of this handsome species of Cockatoo they were feeding on the Cypress ~~tree~~ and it appeared as if they had only shortly arrived from the interior. I would it seems they bred.

NATURAL HISTORY OF VICTORIA.

Locality whence obtained.

Donor's Name.

Remarks.

This powerful Owl built her nest in hollow branches of high Eucalypti, only one nest with 3 spotted white eggs were found of matter a round form.

This Cockatoo prepared his nest in the hollow branches of Eucalypti the eggs and found white

^{this kind.}
The Eggs of gregarious in his habits and from 5 to 7 in number but it could not be ascertained whether more than one or a single one occupy a nest. Moreover the

nests eggs were seen a large number of birds used to occupy the neighborhood trees flying to and fro and making a great noise, apparently

to will draw the attention of the intruder away from their eggs. The eggs and constructed of mud, hard and very thick and long and well balanced in the fork of a tree (Bon tree).

Proprietor the gift of Miss
Fletcher of Cape Town.
Darling.

This beautiful Duck constructs its nest in hollow branches of the gum and box trees sometimes at a considerable height and which was taken contained 8 Eggs and a plentiful supply of very soft down.

This little Swallow builds in the River Banks and many nests were found on the banks of the Darling and Murray. A great many contained no eggs though occupied by the birds and I have supposed as many as 9 swallows alighting out of their holes. The channel was about 30 in deep and I was obliged to cross the creek using some gum leaves and a few feathers were collected. The eggs and found from 5 to 7 in number of a buff color speckled with dirty brown.

This Swallow is very plentiful near the alkali marshes and there is hardly a hut at the salt marsh where some nests might be found.

Mallee Scrub

This little animal
nocturnal in its habits
frequents the sandy
ridges in the mallee
scrub. It is very numerous
there and although it has
many enemies as Owls
different ^{other} animals and
the natives; it brings
forth about 4 young ones
which are born blind.
~~and~~ They burrow into
the sand and the natives
warren found them easily
by applying a long stick
and ruffling the sand.
